

CRITICAL: You are working in a live production repo.

ONLY edit files inside this folder:

`"/Users/ashleyandreano/Desktop/pitch_deploy 3"`

The primary file is:

`"/Users/ashleyandreano/Desktop/pitch_deploy 3/index.html"`

Rules you MUST follow:

- NEVER create duplicate folders like "pitch_deploy 2" or "pitch_deploy 3 copy"
- NEVER create a new index.html anywhere else
- NEVER output a separate downloadable file
- ALWAYS modify the existing index.html IN PLACE
- All changes must apply directly to the file that is already connected to GitHub and Netlify
- Do not suggest copying files manually
- Do not create alternate versions like "index_new.html" or "updated_index.html"

Before finishing, confirm:

1. The file edited is EXACTLY:

`/Users/ashleyandreano/Desktop/pitch_deploy 3/index.html`

2. No new files were created

3. Changes are applied directly to the live repo file

If you are not editing that exact file, STOP and ask for clarification.
